Belangrijke gezondheidswaarschuwingen voor het spelen van videogames

Lichtgevoelige aanvallen

Bij een zeer klein percentage personen kan een aanval optreden wanneer zij worden blootgesteld aan bepaalde visuele beelden, waaronder lichtflitsen of bepaalde patronen die in videogames kunnen voorkomen. Ook bij mensen die geen ziektegeschiedenis hebben van dergelijke aandoeningen of van epilepsie kan een lichte aandoening optreden waardoor zij "lichtgevoelige epileptische aanvallen" ervaren bij het bekijken van videogames.

Deze aanvallen kunnen gepaard gaan met verschillende symptomen, waaronder een licht gevoel in het hoofd, verminderend gezichtsvermogen, zenuwtrekken in het gezicht of de ogen, trillen van armen of benen, desoriëntatie, verwarring of tijdelijk verlies van bewustzijn. Deze aanvallen kunnen ook leiden tot bewusteloosheid of stuip trekkingen waarvan verwondingen als gevolg van vallen of het in aanraking komen met nabije objecten het gevolg kunnen zijn.

Wanneer je een van deze symptomen ondervindt, dien je onmiddellijk de game te staken en een arts te raadplegen. Ouders moeten letten op deze symptomen of hun kinderen ernaar vragen - het ondervinden van deze aanvallen treedt met meer waarschijnlijkheid op bij kinderen en tieners dan bij volwassenen. Het risico van lichtgevoelige epileptische aanvallen kan worden verminderd door de volgende voorzorgsmaatregelen te treffen: verder van het scherm af te gaan zitten; een kleiner scherm te gebruiken; in een goed verlichte kamer te spelen en niet te spelen wanneer je slaperig of moe bent.

Wanneer bij jezelf of een van je familieleden een ziektegeschiedenis van epilepsie bestaat, dien je een arts te raadplegen voordat je een game speelt.

Important Health Warning About Playing Video Games

Photosensitive seizures

A very small percentage of people may experience a seizure when exposed to certain visual images, including flashing lights or patterns that may appear in video games. Even people who have no history of seizures or epilepsy may have an undiagnosed condition that can cause these "photosensitive epileptic seizures" while watching video games.

These seizures may have a variety of symptoms, including lightheadedness, altered vision, eye or face twitching, jerking or shaking of arms or legs, disorientation, confusion, or momentary loss of awareness. Seizures may also cause loss of consciousness or convulsions that can lead to injury from falling down or striking nearby objects.

Immediately stop playing and consult a doctor if you experience any of these symptoms. Parents should watch for or ask their children about the above symptoms—children and teenagers are more likely than adults to experience these seizures. The risk of photosensitive epileptic seizures may be reduced by taking the following precautions: Sit farther from the screen; use a smaller screen; play in a well-lit room; do not play when you are drowsy or fatigued.

If you or any of your relatives have a history of seizures or epilepsy, consult a doctor before playing.
